John Hofmann - Risk Management

From: F. DiPaolo

Date: September 17, 1982

Subject: ONE WTC - ZONE 1 - AIR SAMPLING DURING TENANT ALTERATION WORK

Reference:

Copy To: Messrs. J. Agura, P. Balduzzi, E. Boland, J. Carlock, D. Censullo, W. Connell, L. Feld, R. Linn, D. Montalbano, J. Navas, J. Picone, H. Pool, C. Vasquez

This will confirm our several recent phone conversations in response to your memo of August 19th, which I received on September 2nd. I advised you as follows:

1) That your memo conclusions may be premature because of the incomplete data available. Missing are: Fiber Counts During all Phases of Construction, Correlation to OSHA Standards, Statement on the Nature of the Fibers.

2) That (2) tenant alterations will be under construction in (2) weeks on 28A and that these can be the sites for obtaining the missing data. By copy of this memo, John Picone and Pete Balduzzi are requested to advise you of the precise construction starting dates.

Following receipt of your complete report on this subject, Risk Management and World Trade Department will formulate a plan of action together with WTC Operations, WTC Construction and the Engineering Dept. By copy of this memo, the Engineering Dept. is requested to release the working drawings on the Bank of Hawaii space on 28A where testing will be conducted.
